

CARNIFERTIL PLUS

L-CARNITINE-LIQUID

LIQUID FOR ALL SPECIES

Contains: Raw Glycerol - Propylene Glycol - Sodium Chloride - Carnitine (L-Carnitine) Vit. E - Vit. B12 E8 Selenium (Sodium Selenite).

DESCRIPTION

CARNIFERTIL PLUS is mainly composed of Carnitine (L-Carnitine) whose contribution restores the energy metabolism allowing to remedy all the pathologies that can arise in the transition period, during heat stress and in all cases of a negative energy balance. (NEB - Negative Energy Balance).

The addition of glycol and glycerol offers ready metabolizable energy making CARNIFERTIL PLUS quickly assimilable, available and effective.

- Cancel the negative energy balance (NEB - Negative Energy Balance)
- Improves the endocrine-metabolic balance
- It improves the reduced absorption of nutrients
- Improves the absorption of calcium and magnesium
- Increased nutritional requirements for the needs of the fetus and for the production of colostrum and milk

ACTION

CARNIFERTIL PLUS is a complementary feed for livestock which thanks to its specific formulation finds application in all farms where there are breeding, pre and post parturition sows, pre and post parturition breeding rabbits, dairy cattle in the transition period (from 3 weeks before parturition at 3-4 weeks of lactation), and is characterized by hormonal and metabolic alterations that cause a negative energy balance, where the animal encounters a series of related and very important problems.

DOSAGE

Volatiles: 250 g per quintal of water for 5/10 days.

Breeding rabbits: 250 g per quintal of water for 5-7 days pre-post partum.

Dairy Cattle: 250 g per day (dry).

Dosages may vary depending on the health situation of the farm.

The technical service is available to recommend the dosage.

PACKAGES

Available in tanks of 25 kg

Store in a cool and dry place, away from heat sources.

To be consumed within 12 months from the production date.
