

MULTIVIT

VITAMINS PROVITAMINS - SUBSTANCES WITH SIMILAR EFFECT

LIQUID FOR BIRDS

Contains:

Oils and fats - Sodium Chloride - Vitamin A - D - E - K - Selenium - B Vitamins - Choline Chloride

DESCRIPTION

MULTIVIT is a balanced combination of microemulsified vitamins such as Retinol (Vit.A), Cholecalciferol (Vit. D3), fat-soluble vitamins A, D, E, K and water-soluble vitamins such as B vitamins.

MULTIVIT is micronized and emulsified in such a way as to transform the mixture of oils into micro particles of very small diameter, this process greatly increases the degree of assimilation of vitamins.

With MULTIVIT already after 30 minutes we can assume the full absorption of most of the vitamins contained: peroral injection effect (through food).

- Correct vitamin deficiency states
- Corrects osteoporosis
- Activates the sulphate present in the tissues
- It helps the reproductive process and the formation of sexual identity.
- It acts on intestinal cells by stimulating biosynthesis by promoting the absorption of Ca (*Calcium Binding Protein*)

ACTION

MULTIVIT exerts a fundamental action on the bones, favoring remineralization, that is the physiological replacement of calcium phosphates. Promotes intestinal absorption of calcium and phosphorus through the kidneys, controlling bone deposition and avoiding the phenomena of bowing of the bones and growth failure in young animals, softening and fragility of the bones, anorexia and osteomalacy (decrease in body weight) in animals elderly people.

DOSAGE

Administer at a dose of g.60/100 per 100L of water.

Solutions must be renewed every 24 hours

Dosages may vary depending on the health situation of the farm.

The technical service is available to advise the dosage.

PACKAGES

Available in tanks of 10 Kg

Store in a cool, dry place, away from heat sources.

To be consumed within 12 months from the date of production.

FAMI-QS Certificate
