

PHYTO-SAN PLUS®

FOR A NATURAL DIET

FEED FOR ALL SPECIES

Contains: calcium carbonate, concentrated of phenols and polifenols obtained from hydrolyzed lignocellulose (05128-IT Feed Material Register), magnesium chloride, soft wheat flour

DESCRIPTION

The effectiveness of PHYTO-SAN PLUS® is due to the chemical bond that has been obtained and the subsequent formation of polymeric structures with high molecular weight.

The chemical bond obtained in the production process and the polymerization of plant molecules produce a macromolecule that in the intestine partly dissociates and becomes assimilable with benefits such as:

- Control of Gram- and Gram+ bacteria
- Improvement of the health status of animals
- Improvement of production indices (GDP and ICA)
- Reduction of antibiotic resistance

ACTION

PHYTO-SAN PLUS® is able to destabilize the cell membrane of the bacterium by increasing its permeability. Inside it reduces the contents so that bacteria cannot carry out their metabolism. It prevents the adhesion of the bacterium to the epithelium by preventing its colonization.

PHYTO-SAN PLUS® has proven effective as an alternative to the application of the drug in the control of enteric pathologies.

DOSAGE

Administer in addition to the complete feed/daily ration at the rate of 200-400 grams per 100 Kg of complete feed.

Maximum dosage: 400 g per 100 kg for 21 days.

Cattle: Milk g 10/40 head day - Meat g 10/40 head day.

Dosages may vary depending on the health situation of the farm.

The technical service is available to advise on the dosage.

PACKAGES

Available in bags of 20 Kg

Store in a cool, dry place, away from heat sources.

To be consumed within 12 months from the date of production.
