

PHYTO-TAC

CONTROL OF THE NERVOUS STATES OF BIRDS

LIQUID FOR ALL SPECIES

Contains: Glucose, sodium chloride, stabilized plant extracts of: AGNUS C. – HUMULUS L. – JUNIPERUS O.

DESCRIPTION

The phytoderivative active ingredients contained in PHYTO-TAC, as properties reported in the scientific literature, play a deep synergistic action during all the phases in which it is necessary to reassure nervous and aggressive animals (turkeys in the phase of sexual maturity, laying hens in cages and on the ground, game, laying hen, displacements, sending to the slaughterhouse, etc.) with obvious advantages on animal welfare and effects such as:

- Reduction of allotriophagy phenomena
- Reduction of cannibalism
- Reduction of production loss
- Reductions in injuries and traumatism

ACTION

Cannibalism and allotriophagy should not be confused with the normal hierarchy of animals or with the so-called "pecking order". They are serious phenomena, once generated it is difficult to remedy them, they can often degenerate into "habit" and make some subjects "killer".

PHYTO-TAC facilitates the prevention and control of the problem avoiding the aggravation of the situation that can lead to serious health and economic damage. The product does not cause drowsiness, acts directly on the nervous system but does not alter the normal functions of animals.

DOSAGE

To be administered in drinking water at the rate of 0.2% - 0.3% for seven days.

Dosages may vary depending on the health situation of the farm.

The technical service is available to advise the dosage.

PACKAGES

Available in tanks of 10 kg.

Store in a cool, dry place, away from heat sources.

Store within 24 months from the date of manufacture.

FAMI-QS Certificate
