

## ZOOBEN

### GROWTH STIMULATION

#### COMPLEMENTARY FEED FOR ALL SPECIES

Contains: Protein concentrate of yeast cultures, minute parts of fermented malted wheat, wheat, calcium gluconate

ADDITIVES PER Kg:

Amino acids, their salts and analogues 3c3.6.1 L-Arginine 5.000 mg

#### DESCRIPTION

ZOOBEN is a protein concentrate of soy, yeast cultures, minute parts of highly digestible malted wheat able to release a high number of oligopeptides, precursors of binding proteins (BP-s) and **ghrelin**, it is also able to free energy from the catabolism of the foods present by producing AGVs.

ZOOBEN very quickly restores the beneficial effects of IGF-I with rapid repercussions on growth, fertility and immune system response. Effects:

- Restores IGF-I levels
- Stimulation of the secretion of the hormones GH, PRL and ACTH
- Improvement of production indices (GDP and ICA)
- Immediate effects on growth
- Increased fertility

#### ACTION

Given the importance of IGF-s and the involvement of multiple hormonal metabolic interferences, reducing the negative effects of an infectious, inflammatory, growth retardation, or in cases of negative energy balance (NEB) is now possible, dietary supplementation with ZOOBEN very quickly restores IGF-I values reduced by a negative energy balance (NEB) in turn caused by: sub-clinical infections, inflammation, heat stress, poor appetite, etc. with immediate effects on growth, fertility and immune system response.

#### DOSAGE

Administer at the rate of 250 grams per 100Kg of finished feed.

Dosages may vary depending on the health situation of the farm.

The technical service is available to advise the dosage.

#### PACKAGES

Available in bags of kg.20

Store in a cool, dry place, away from heat sources.

To be consumed within 12 months from the date of production.
