

ZOOMITE DRY

CONTROL OF DERMANYSSUS GALLINAE INFESTATIONS

MINERAL FEED FOR BIRDS

Contains: Calcium chloride, calcium carbonate from ground calcium rocks, soft wheat flour, leaf flour of Solanum Glaucophyllum waxy, pregelatinized wheat starch, beet sugar.
ADDITIVES (per Kg): - Anti-caking agents: 1g568 Clinoptilolite of sedimentary origin

DESCRIPTION

ZOOMITE DRY is a mineral feed that makes the blood of animals indigestible to the mite, without causing any damage to them who on the contrary benefit from it.

- Dermanyssus Gallinae infestations

ACTION

The mite once the epithelium is engraved, injects a protein with saliva, responsible for skin irritation but above all with high anticoagulant activity, an indispensable condition for digesting blood, its only food. ZOOMITE DRY, through the synergy of the ingredients, restores the process of blood clotting within the digestive system of the mite making it indigestible, also the excess of calcium leads to obtain the calcification of the mite itself that will face death.

DOSAGE

To be mixed in addition to the complete feed / daily ration at the rate of 0.10% for 30/60 days.
Repeat as needed.
Dosages may vary depending on the health situation of the farm.
The technical service is available to advise the dosage.
